

Sustainably SOURCED GRIT

FEED INFORMATION

Digestive aid | Nutrient maximizer | Supports healthy gizzards

It's not much of a *grind* to be a bird.

That's because our feathered friends don't have teeth, and need grit in the gizzard to help break down food and receive nutrients. Grit comes in different sizes to suit different ages, so flocks can digest all the nutrition they need.

FEEDING INFO

Trust the incredible instincts of chickens and ducks—when offered Grit, they know exactly how much they need to digest their food.

STARTER GRIT:

Sprinkle directly on feed for the first few days, then offer in a separate container for birds to consume.

GROWER AND LAYER GRIT:

Offer free choice, apart from feed.

STARTER GRIT:

CHICKS | 0-8 WEEKS
DUCKLINGS | 0-4 WEEKS

GROWER GRIT:

CHICKENS | 8-20 WEEKS
DUCKS | 4-20 WEEKS

LAYER GRIT:

CHICKENS & DUCKS | 20+ WEEKS
